Magnetic Type Liquid Level Contols
Series 201, 203, 204, 251, 253, 254, 1271, 1273, 1274 - Sealed Housing with Stainless Steel Float
Series 211, 213, 214, 221, 223, 224 - Flanged Steel Float Chamber with Removable Steel Float

## Installation and Operating Instructions

## Operating Characteristics

When the float rises to the operating point, the switch or switches are actuated by the mutual attraction between a magnetic plunger attached to the float within the float chamber and a magnet attached to the switch operating assembly. When the float drops, the magnetic plunger is moved out of the field of the magnet on the switch operating assembly and the switch or switches are restored to their original position by gravity.

The magnetic plunger attached to the float moves within a tube within the switch enclosure. The switch unit is mounted on the tube singly or in pairs. Type 1271-Single Stage Only.

## Explanation of Type and Code Numbers

Example: Type 201G-4820-C1-60.
201 is the type number of the control; letter " $G$ " denotes enclosure; -4820 designates circuit arrangement; C1 denotes materials of construction; 60 indicates pressure rating and specific gravity.

## Enclosures

General Purpose enclosures are identified by the letter ' G : in type number as in 201G, 1273G.

Weather Resistant enclosures are identified by the letter "W" in type number as in 204W, 211W.

Explosion-proof enclosures are identified by the letter"E" in type number as in 201E, 1274E.

Explosion-proof -- Vapor-proof enclosures are identified by the letters "EV" in type number as in 203EV, 223EV.

## Special Features

Semi-Automatic (with manual reset) operates automatically on level fall only - manual reset required on level rise. This operation identified by the letters "RU" in type number as in 201GRU.

Wide Differential (Single Stage) available only for controls with mercury switch contacts. Provides double the fixed level change ("B: in Liquid Level Change Table) between on and off switch operation. Identified by the letter "D" in type number as in 201GD. Type 1271 Not Available.

## 440 Volt Service

Identified by the digit 5 in circuit specification No. such as in 5820, -5821 . For two-stage operation 440 V is limited to SP-ST in each stage.

## Location -- Mounting

Select location recommended by equipment manufacturer. Mount all controls vertically and be sure that control switch mechanism is level.

## Wiring

Wire in accordance with local electrical codes or follow equipment manufacturer's instructions.
Align wiring block to face conduit opening and tighten brass screw of switch assembly.
The 3/4"NPT conduit connection (on all types can be rotated $360^{\circ}$ to facilitate wiring.
Do not overload electrically. See rating stamped on nameplate.

## Operating Adjustments

Level Adjustment (Single Stage Only) Types 201, 203, 204, 211, $213,214,221,223,224$, and 251, 253, 254 only. When single stage controls are shipped from the factory, the switch operating mechanism (illustration No. 11) is positioned at the center of the armature tube. The operating level can be raised approximately one inch by moving switch mechanism up to the top of the armature tube. Operating level may also be lowered one inch by moving switch mechanism down to bottom of armature tube. To obtain either operation, loosen clamp screw (illustration No. 11) before raising or lowering switch assembly. Be sure to tighten clamp screw after the desired adjustment is made.

Type 1271, 1273, 1274 (Single Stage Operation) the switch operating mechanism must rest at the bottom of armature tube against enclosure base.

CIRCUIT ARRANGEMENTS
Controls with Mercury Switches
Single Stage Only

| Specification No. |  | Circuit Arrangement | Circuit Response to Liquid Level Changes |
| :---: | :---: | :---: | :---: |
| 120/240 V | 440 V |  |  |
| -4820 | -5820 | SP-ST | Closes As Level Falls |
| -4821 | -5821 | SP-ST | Closes As Level Rises |
| -4815 | -5815 | SP-DT | One Circuit Closes As Other Circuit Opens |
| -4814 | -5814 | DP-ST | Closes As Level Falls |
| -4813 | -5813 | DP-ST | Closes As Level Rises |

Two-Stage Operation (With Mercury Switches). Any two circuits shown in circuit arrangement table are available on each stage for 120/240 volts. Example: -4820-13 designates a SP-ST lower stage to close as level falls and a DP-ST upper stage opens as level falls.

## Circuit Arrangements

With Snap-Acting Switches

## Single Stage

Specification No. -7810 (1) SP-DT Switch Specification No. -7806 (2) SP-DT Switches

## Two Stage

Specification No. -7810-10 SP-DT Each Stage. Specification No. -7806-06 DP-DT Each Stage.

Do not oil any parts. Never leave cover off the switch operating mechanism. Do not tamper with switch wires. Position of these wires is essential to proper operation. Tampering with these wires will void warranty.

## MERCOID DIVISION

[^0]:    "A" - level at which single (or lower stage) operates on level rise.
    " B " - operating differential single (or lower stage) - drop in level to restore switch to original position.
    "C" - level at which upper stage operates on level rise.
    "D" - operating differential of upper stage - drop in level to restore switch to original position.
    "E" - increase in level above "A" to operate upper stage.
