**Series PFT**

**Paddlewheel Flow Sensor**

Non-Magnetic Sensing, Insertion Style for 1-1/2 to 40” Pipe

---

**The Series PFT** is a paddlewheel flow sensor used to monitor liquid flow rates in pipes from 1-1/2 to 40” with just one size adjustable sensor. A square wave output signal is generated with frequency proportional to flow velocity. Multiple wetted material choices offer application versatility. The PFT is ideal for monitoring water flow rates in irrigation systems and building automation cooling systems.

The PFT uses inductive sensing to sense the blades of the impeller as they rotate. Sensor technology does not use magnets allowing low flow rate monitoring and no concerns with magnetic material in the flow. Paddlewheel, shaft and bearings are easily field replaceable.

**FEATURES**

- Bearings and shaft offer excellent wear protection even in applications with particulate for long life
- Weatherproof and submersible rated for irrigation applications

**APPLICATIONS**

- Irrigation, ground water remediation, cooling systems, pump protection, leak detection, filtration systems
