The Compact Series WHT Humidity/Temperature Transmitter is designed to withstand the elements. A removable sintered filter protects the polymer capacitance sensor from solid objects that may come in contact with the transmitter. The transmitter is available with 4 to 20 mA or 0 to 10 VDC output signals for both temperature and humidity. This transmitter is ideal for measuring outside air temperature and humidity levels for air handling economizer applications.

AQStick™ Ambient Volatile Organic Compound Monitor

Powered by USB Port, Local Indication

The AQStick™ Ambient Volatile Organic Compound (VOC) Monitor monitors ambient air quality by detecting the VOC content in the air. Some common sources of VOC contamination are carpets, building materials, paints, cleaners, and tobacco smoke. Even low concentrations of these compounds can affect building occupants' comfort. A computer's USB port provides power for the sensor and the LED lights which change color in accordance with the ambient air quality. In order to correspond with ASHRAE's standards for air quality, the VOC reading from the monitor is converted from a percentage contaminated to an equivalent PPM reading of CO₂. The percentage contaminated multiplied by 2000 PPM of CO₂ gives the equivalent concentration of CO₂. From the factory, the LED is green under 1000 PPM CO₂, yellow for 1000 to 1500 PPM CO₂, and red above 1500 PPM CO₂. These factory values can be changed using the free online software. When using the free online software, the AQStick™ ambient VOC monitor can log and graph how building conditions change over time.
