Series BPV Pneumatic Ball Vibrators are the best choice for bridge-break in thin walls and small tanks. This model can be used in vibrating separators, vibrating conveyors, and against electroplating build-up. It can also be used on material compacted while packing or sand compacted while molding.

How It Operates
The aluminum body is equipped with a steel ring and ball inside that is tightly closed by plastic side covers. Vibration is caused when the internal ball, pushed by compressed air, runs in a rotary motion to produce centrifugal force.

Features
- The body is made of high strength aluminum alloy.
- Small in size and lightweight.
- Can be used in high humidity or dusty working areas.
- Frequency and amplitude of vibration can be adjusted as needed.
