DDB Series Direct Coupled Actuators are non-spring return actuators that are perfect for positioning of dampers and valves in HVAC systems. Actuators are designed to accept floating control signals and come in a variety of power supplies. Actuators produce 88 to 265 in-lb (10 to 30 Nm) of torque. Contact factory for optional internal auxiliary switches.

Features
- Direct mount.
- Actuator travel indicator.
- Overload protection.
- Manual override.
- Floating control signal.
- 60,000 cycles nominal.

Function Testing
Press the manual button on the back of the actuator. The gearing inside the actuator will break away. The damper can be operated manually while pressing the manual button. DO NOT OPERATE WHEN POWER IS ON!

MAINTENANCE
Upon final installation of the Series DDB Non-Spring Return Direct Coupled Actuator, no routine maintenance is required. A periodic check of the system calibration is recommended. The Series DDB is not field serviceable and should be returned if repair is needed (field repair should not be attempted and may void warranty). Be sure to include a brief description of the problem plus any relevant application notes. Contact customer service to receive a return good authorization number before shipping.
