The Series DLP is a data logger that can record pressure and temperature. The 1/4” NPT fitting comes standard and allows the logger to be adapted to almost any pressure fitting. The internal temperature sensor provides accurate temperature measurements without the need of a separate temperature recorder, and many of the models provide a choice between measuring pressure in PSIA or PSIG. The DLP can easily be started and stopped from a PC or delayed to start up to six months in advance. The battery-powered data logger can store over 16,000 measurements per channel, and the easy to use DL700 software makes retrieving data simple.

SOFTWARE INSTALLATION
1. Insert installation CD and click Install Dwyer 2.00.
2. Follow onscreen instructions.
3. Next, click Install USB Interface Drivers on the CD Contents screen.
4. Click Install.

NOTICE
A message may appear stating that the software has not passed Windows Logo Testing. This software has been tested and works properly. Click Continue Anyway if this window appears.

CONNECT THE LOGGER
1. Remove the Warning sticker from the USB Data Logger Interface converter to uncover the female end of the jack.
2. Insert one end of the jack into the USB Data Logger Interface converter and the other end into the serial port in the data logger.
3. The serial port is located under the cap that has the key ring hole. Unscrew the cap and connect the cable.
4. Connect the DL700 USB cord to the PC and connect the other end to the USB Data Logger Interface converter.

START THE LOGGER
1. To start the logger, from the Communication menu select Auto Configure Port.
2. From the Device menu select Start Device and choose the desired Reading Rate.
3. Click the Start button.

NOTICE
Starting the device erases all data currently stored in the logger.

4. The logger will stop recording when the device is full or when Stop Device is selected from the Device menu.

DOWNLOAD DATA
1. To download data, connect the logger to the PC.
2. Select Read Device Data from the Device menu.
3. Data is then presented graphically.

*For more detailed information on using the DL700 software, please consult the Software Manual.

BATTERIES
Typical battery life is 1 year. Fast logging will considerably shorten the battery life. To preserve battery life, it is recommended to use the longest practical sampling rate, and when the logger is not in use, select Stop Device from the Device menu.

BATTERY REPLACEMENT INSTRUCTIONS
1. Remove the end cap with the key ring hole in it, revealing the serial port.
2. Remove the snap-ring with snap-ring pliers.

3. Once the snap-ring has been removed, press gently on the white disk to force one end up for easy removal.
4. Use 9/16” (15 mm) wrench, or a non-slip grip, to remove the NPT end.
5. Gently slide the circuit board from the metal case.
6. Set the circuit board down and make note of the orientation of the battery’s positive (+) terminal. The “+” indication is also on the circuit board.
7. Remove the old battery and install the new battery noting the orientation of the positive (+) terminal.

NOTICE
Depending on where you purchased the battery, the leads may not be bent correctly or at all. Follow the diagram below for bending the battery leads properly.

8. Repeat steps 5 through 1 in reverse order to complete installation.

MAINTENANCE
Upon final installation of the Series DLP Data Logger, no routine maintenance is required. The Series DLP is not field serviceable and should be returned if repair is needed (field repair should not be attempted and may void warranty). Be sure to include a brief description of the problem plus any relevant application notes. Contact customer service to receive a Return Goods Authorization number before shipping.
