Save space while maintaining flow rates with the compact Series SAV-ST Angle Seat Valve. The pneumatic, externally piloted angle seat valve is operated by a single acting actuator with a mechanical spring for failsafe operation. Select from either normally closed (NC) or normally open (NO) configurations. Normally open valves can be used to prevent waterhammer on valve closure in liquid applications.

Constructed of investment case stainless steel and PTFE seals, the Series SAV-ST can be used in most gas, liquid, steam and corrosive applications. Integral heat sinks dissipate heat protecting the Polyamide actuator, ensuring longer life. The Series SAV-ST can be mounted in any position. For added flexibility, the actuator housing rotates 360 degrees for positioning of the pressure ports. Standard visual indicator shows open or closed position.
