**FACTORY CONFIGURATION**

Each SCC-LI unit is configured and calibrated at the factory for the input signal range and voltage output range printed by the factory on the MSC unit's side-label.

The unit may be reconfigured to accept a 4 to 20mA input signal and provide an isolated 0 to 10V, 0 to 20mA, or 4 to 20mA output signal. Unit re-configuration requires Dwyer's SC Configuration Utility.

This SCC unit may be reconfigured by a user at any time via their personal computer (PC) or handheld personal computer (HPC) by installing Dwyer Instrument’s Windows®/PC or Windows®/CE HPC based SC Configurator Utility, interfacing the SCC unit to the computer’s RS-232C comm port with an SCC Configuration Cable, and then changing the unit’s input/output configuration settings.

**OPERATIONAL DESCRIPTION**

The SCC family of single channel signal conditioning and isolating modules are intelligent, user programmable, high-accuracy, user friendly, signal conditioning units.

Each SCC model supports a one (1) specific analog signal-type on its input channel and outputs one (1) high-level current or voltage signal depending upon model. A diverse SCC model family permits users to select the model which meets their unique signal conditioning needs.

SCC models may be purchased with a factory preset configuration for plug-n-play application or custom configured to meet their unique need. All SCC models may be configured/reconfigured by a user at anytime through use of an optional SC Configuration Utility.

**Theory of Operation** - An analog world input signal arriving at the SCC unit is isolated, filtered, amplified, scaled and/or linearized (as required) by the units onboard microprocessor under the direction of the unit’s configuration parameters set by the user (or factory) via Windows®/PC or Windows®/CE HPC based SC Configurator Utility.

The conditioned signal is then converted to a high level analog current or voltage output signal (depending upon model) and presented at the unit’s isolated output.

**REQUIREMENTS**

**Mandatory:**
- 15 - 32VDC, 50mA external supply voltage

**Optional:**

**INSTALLATION**

1. Mount SCC unit on standard TS32 or TS35 DIN rail.
2. See wiring diagram on reverse side. Connect external 15 to 32VDC power source to MSC unit:
   - Positive (+) to SCC terminal +VDC
   - Negative (-) to SCC terminal -VDC/-OUT
3. Connect input current device to SCC unit:
   - Positive (+) to SCC terminal +LOOP IN
   - Negative (-) to SCC terminal - LOOP OUT
4. Connect output actuator/device to SCC unit:
   - Positive (+) to SCC terminal +OUT
   - Negative (-) to SCC terminal -VDC/-OUT
5. Connect Digital Enable to SCC unit:
   - Dig. En. Positive (+) to SCC terminal DIG EN
   - Dig. En. Negative (-) to SCC terminal -VDC/-OUT

**Digital Enable Description:**
A Digital Enable input signal allows the user to Enable or Disable the OUTPUT signal through the use of an external control signal. This feature makes it possible to connect several output signals to a single data acquisition input.

Providing a DC voltage of between 2 and 32 volts across SCC unit terminals 1 (-) and 6 (+) places the module’s output circuit to the OFF state. A voltage of between 0 and 1.5 volts across these terminals places the output circuit to the ON state.

If the user does not require this feature do not connect up the Digital Enable circuitry.

**DIAGNOSTIC TOOLS**

Two LEDs one RED and one GREEN are located on the front face of the MSC’s enclosure and provide user with visual indication as to unit operation.

**LED FUNCTIONALITY**

- **GREEN = ON**
  - **Meaning:** Input Circuit is ON
- **RED = ON**
  - **Meaning:** Output Circuit is ON

All other combinations indicate the unit is not operating correctly.
**Warning:** This unit is protected against abnormal voltages. Marginally low voltages, marginally high voltages and power fluctuations for extended periods of time can cause permanent damage.

**Caution:** When installing the unit’s wiring do not over-tighten the wiring terminal set screws. Turn set screw until wire’s resistance is encountered and wire is securely captured. Over tightening will cause damage to the unit.

Recommended torque: 1.0 in/lbs

---

**PRODUCT DATA**

**Accuracy:**
- Input:  Current -- 4 to 20mA
- Input:  Voltage -- 0 to 10V
- Output:  Current -- 0 to 20mA
- Output:  Voltage -- 0 to 10V

**Dimensions:**
- 75mm H X 12.2mm W X 60 mm D

**Recommended Torque:**
- 1.0 in/lbs

**Specifications**

| Input Power | 15-32VDC |
| Isolation | 2 way input to power/output 150V peak |
| Step Response | 99%: 0.08 seconds or 0.15 seconds |

**Operating Temp.**
-40 to +75°C

**Storage Temp.**
-40 to +85°C

**Mounting:**
- 32 and 35mm DIN Rail & G Rail

**Dimensions:**
- 75mm H X 12.2mm W X 60 mm D
- 2.95” X 0.485” X 2.5”, 24 modules can be installed per linear foot of DIN Rail

**Diagnostics LEDs:**
- Active indications

**Digital Enable:**
- (+) Input Signal
- (+) Input Signal
- OUT
- OUT
- Digital Enable

**TRADING SECRETS AND PROPRIETARY NOTICE**

- This document and the software described herein contains valuable trade secrets and proprietary information of Dwyer Instruments, Inc., and are copyrighted as such. Under the copyright laws, this document and the software supplied by Dwyer Instruments, Inc. may not be copied, in whole or in part, without the written consent of Dwyer Instruments, Inc., except in the normal use of the software or to make a backup copy. The use of any of the proprietary and copyright notices must be affixed to any copies to be made for others, whether or not sold, given, or loaned to another person. Under the law, copying intertitles to another language or format is not allowed.

- Dwyer Instruments, Inc. in developing this product and drivers for applicable programmable logic controllers has attempted to offer the most current, correct and clearly expressed information possible. Nonetheless, errors can occur. Expect as expressly set forth above. Dwyer Instruments, Inc. does not warrant that this software is free from bugs, errors, or other application limitations.

**Warranty**

- Manufacturer: Dwyer Instruments, Inc. warrants that its products, under normal use and specified use, are free from defects and proper workmanship for a period of twelve (12) months from the date of shipment to the Dwyer Instruments, Inc. factory. Dwyer Instruments, Inc. makes no other warranties or representations express or implied, whether of merchantability, suitability of fitness for a particular purpose or otherwise. Dwyer Instruments, Inc. quality products were designed, and are manufactured with tight tolerance specifications. Any attempt to repair or otherwise modify Dwyer Instruments, Inc. products will result in the termination of all warranty benefits. Although Dwyer Instruments, Inc. may choose to repair a product returned under warranty, it will not attempt to repair products that are beyond the warranty period. Evaluation and repair costs of product beyond the warranty period would likely exceed replacement costs. As such, Dwyer Instruments, Inc. supports the policy of “repair by replacement.”

**Returning Material to the Manufacturer**

- Should it become necessary to return any material to the manufacturer (Dwyer Instruments, Inc.), a Return Authorization (RA) number must first be obtained. Telephone Dwyer Instruments, Inc. at 219-879-8868 or 219-879-8000 or Fax 219-879-8057 to request an RA. Be prepared to (1) identify the material to be returned (model, SN serial order), (2) Detail the reason for the return, (3) Describe the “next step” expectations from Dwyer Instruments, Inc., (4) Provide a Purchase Order, If a replacement is requested prior to the receipt of the return – even it is believed that the return is covered under warranty. When returning material to Dwyer Instruments, Inc., the RA must be included on all shipping documents and prominently displayed on the outside of the shipping container – this will reduce your turn around time.

**Limitation of Liability**

- Dwyer Instruments, Inc. products are intended for installation by qualified personnel into a larger piece of equipment or system and are not accessible by the operator; (3) Connect the equipment into an outlet on a circuit different from that to which the receiver is connected; (4) Consult the dealer or an experienced radio/TV technician for help.

**COPYRIGHT NOTICE**

- This document and the software supplied by Dwyer Instruments, Inc. are Copyright 1995 - 1997 by Dwyer Instruments, Inc.. All rights reserved. The software described in this manual is furnished "as is."

**F.C.C. STATEMENT**

- This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to correct the interference by one of the following measures: (1) Reorient or relocate the receiving antenna. (2) Increase the separation between the equipment and receiver. (3) Connect the equipment into an outlet on a circuit different from that to which the receiver is connected; (4) Consult the dealer or an experienced radio/TV technician for help.

**INSTALLATION AND SAFETY GUIDANCE NOTES**

**Environment**

- The equipment is designed to operate reliably and safely in its specified environment. However the following guidelines must be followed to ensure Safety, Electromagnetic Compatibility and Performance.
  - Products have been tested for the Industrial Environment (BS EN 50581-2 and IEC859-2) unless otherwise stated. Operating in any other environment is not guaranteed and at the risk of the User.
  - The User is required to suppress high energy transients, such as those caused by lightning strikes, unless the product is specified for such purposes. Non-releasable loads and contact arcing must be suppressed at source.
  - Products are intended for installation inside an equipment cabinet or suitable enclosure unless otherwise specified. This should be accessible only to qualified personnel during commissioning and maintenance. Open chassis products for use above 50V should only be accessible by the removal of a cover using a key or tool.
  - Anti-dielectric precautions and conventional instrumentation best practice must always be observed. Each active module should be protected by a suitable rated fuse or equivalent protection device.

**Product EMC Performance**

- The performance of Dwyer Instruments, Inc. products that fall within the scope of the EMC directive will meet the requirements of the relevant performance criteria as determined by the particular tests listed in the EMC standards. Products may temporarily be affected by the application of some electromechanical disturbances but will return to published specification thereafter. Individual product details are requested.
